Candidates must write the Set No on the title page of the answer book.

SAHODAYA PRE BOARD EXAMINATION – 2023-24

- Please check that this question paper contains 12 printed pages.
- Set number given on the right-hand side of the question paper should be written on the title page of the answer book by the candidate.
- Check that this question paper contains 33 questions.
- Write down the Serial Number of the question in the left side of the margin before attempting it.
- Is minutes time has been allotted to read this question paper. The question paper will be distributed 15 minutes prior to the commencement of the examination. The students will read the question paper only and will not write any answer on the answer script during the period. Students should not write anything in the question paper.

CLASS-XII

Sub.: BIOLOGY (044)

General Instructions:

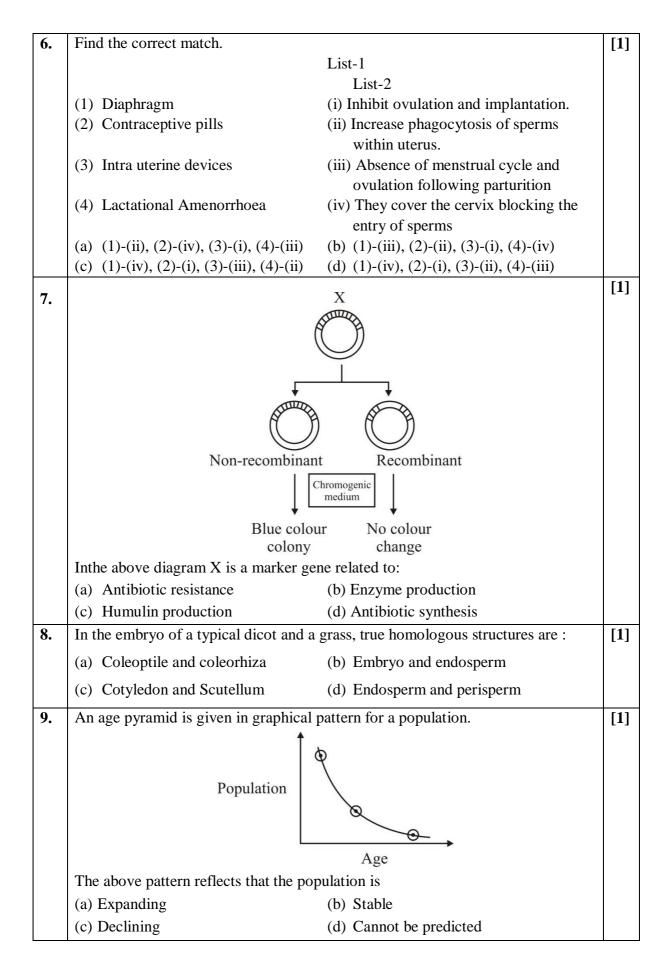

Time Allowed: 3 hours

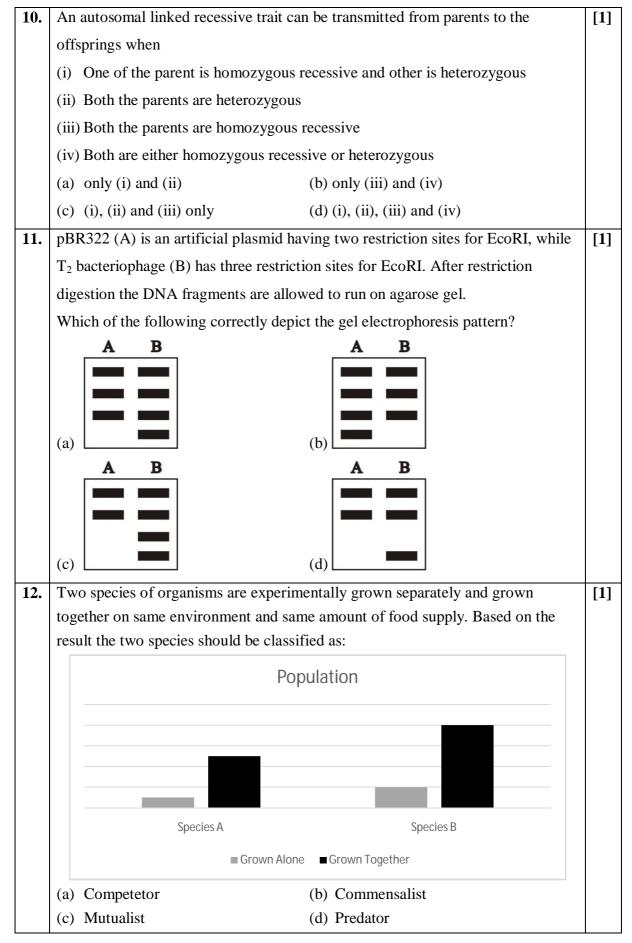

Maximum Marks: 70

- All questions are compulsory.
- The question paper has five sections and 33 questions. All questions are compulsory.
- Section–A has 16 questions of 1 mark each; Section–B has 5 questions of 2 marks each; Section– C has 7 questions of 3 marks each; Section– D has 2 case-based questions of 4 marks each; and Section–E has 3 questions of 5 marks each.
- There is no overall choice. However, internal choices have been provided in some questions. A student has to attempt only one of the alternatives in such questions.
- Wherever necessary, neat and properly labeled diagrams should be drawn.

	SEC	TION – A	
1.	Match the items in Column-A and Co	lumn-B and choose the correct answer.	[1]
	Column-A	Column-B	
	(1) Lady bird	(i) Methanobacterium	
	(2) Mycorrhiza	(ii) Trichoderma	
	(3) Biological control	(iii) Aphids	
	(4) Biogas	(iv) Glomus	
	(a) (1)-(ii), (2)-(iv), (3)-(iii), (4)-(i)	(b) (1)-(iii), (2)-(iv), (3)-(ii), (4)-(i)	
	(c) (1)-(iv), (2)-(i), (3)-(ii), (4)-(iii)	(d) (1)-(iii), (2)-(ii), (3)-(i), (4)-(iv)

13.	Assertion : DNA replication in bacteria is bidirectional.	[1]
	Reason : A chromosome with primary constriction is called SAT-	
	chromosome.	
	(a) Both Assertion and Reason are true and Reason is the correct explanation of	
	Assertion.	
	(b) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.	
	(c) If Assertion is true but Reason is false	
	(d) If Assertion is false but Reason is true	
14.	Assertion : Endomycorrhiza of forest trees contribute to the efficient nutrient	[1]
	cycling in tropical forest ecosystem.	
	Reason : The fungi that formed mycorrhizal association with plant make	
	nutrient ions available to them.	
	(a) Both Assertion and Reason are true and Reason is the correct explanation of	
	Assertion.	
	(b) Both Assertion and Reason are true but Reason is not the correct explanation	
	of Assertion.	
	(c) If Assertion is true but Reason is false	
	(d)If Assertion is false but Reason is true	
15.	Assertion : Ethidium bromide is an intercalating agent which is used as a fluorescent tag for the DNA fragments in agarose gel electrophoresis.	[1]
	Reason : Ethidium bromide is highly toxic and carcinogen.	
	(a) Both Assertion and Reason are true and Reason is the correct explanation of	
	Assertion.	
	(b) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.	
	(c) If Assertion is true but Reason is false	
	(d)If Assertion is false but Reason is true	
16.	Assertion : Biodiversity is worth preserving for ethical reasons and broad	
	utilitarians.	
	Reason : 32% of Amphibia are facing the threat of extinction as their	
	breeding ground is reducing by human activity.	
	(a) Both Assertion and Reason are true and Reason is the correct explanation of	
	Assertion.	
	(b) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.	
	(c) If Assertion is true but Reason is false	
	(d) If Assertion is false but Reason is true	

	SECTION – B					
17.	How is the variation differently explained by mutation theory of Hugo de vries	[2]				
	and Darwin's theory of natural selection? Mention any four points.					
18.	(a) How is it ensured that only one sperm fertilize the ovum?					
	(b) What induces the completion of meiotic division in secondary oocyte?					
	(c) Arrange the hormone in sequence of the production in a pregnant woman					
	hCG, Relaxin, LH, Progesterone.					
19.	A small stretch of DNA template strand that codes for a polypeptide as shown	[2]				
	here					
	3'- CAT CAT AGA TGA AAC 5'					
	(a) Which type of mutation could have occurred in each type resulting in the					
	following mistakes during replication of the above original sequence; (i) 3'- CAT CAT AGA TGA ATC - 5'					
	(ii) 3'- CAT ATA GAT GAA AC - 5'					
	(b) How many amino acids will be translated from each of the strands (i) and (ii)					
	respectively?					
	OR					
	(a) Why does replication occurs within replication fork not in the entire length					
	simultaneously? (b) What enables histones to acquire a positive charge?					
20.	(a) A woman had just undergone a kidney transplant. A bioactive molecular drug	[2]				
	is administered to oppose kidney rejection by the body. What is the bioactive					
	molecule? Name the microbe from which this is extracted.					
	(b) What are flocs?					
21.	The graphs below show the result of blood tests of a person X during illness	[2]				
	(Graph I) and after recovering (Graph II)					
	Latipoc Latipoc					
	of an					
	Amount of antibody in blood serum Amount of antibody in blood serum					
	$\begin{array}{c c c c c c c c c c c c c c c c c c c $					
	Antibody Type Antibody Type					
	(Graph - I) (Graph - II)					
	(a) If person X has exposed to pollen grains of <i>Parthenium</i> , which type of antibody will be produced in his body?					
	(b) With reference to the above graph, what will you infer about the disease in a					
	(b) With reference to the above graph, what will you infer about the disease in					

	 (a) (i) Mention the ploidy level of A and B. (ii) Write the function of C. (iii)Mention the role of D in development of some seeds of orange. (b) State how apomixis is commercially beneficial. (c) (i) Name two parasitic species that contain thousands of tiny seeds in their fruits. (ii) Ajanta was given castor and bean seeds, which one will you select to observe endosperm? 	
32.	 (a) Who and how revealed the biochemical nature of transforming principle? (b) If a bacterium divides in every 25 minutes what would be the proportion of hybrid and light densities of DNA molecule after 100 minutes. (c) Replication was allowed to take place in the presence of radioactive deoxyribonucleotides in E.coli mutant for DNA ligase. Newly synthesized radioactive DNA was purified and centrifuged using density gradient centrifugation. What type of differences will be observed in daughter DNA strands? [3 + 1 + 1] 	[5]
	OR	
	 (a) (i) 5'AUCAUAAUGAACGUAAGGUAAACGAUC3'. Identify the UTR sequence and write its role. (ii) Mention the role of 23S rRNA in bacteria during protein synthesis. (iii) Name the free living non-pathogenic nematode whose genome has been sequenced. (b) Explain the significance of SNPs in human genome. (c) Why does the lac-operen shut down some time after the addition of lactose in the medium where E.coli is growing?
